## **ABSTRACT**

This paper deals with the analysis of the financial statements of the largest construction and engineering firms in the country, companies which operate in one of the largest - if not the greatest, especially in recent years, field of the Greek economy, a field that was seriously affected by the Greek financial crisis. For the analysis attempted, a representative sample of companies were chosen in order to include the largest companies, with sole restriction the availability of the published economic data. From that amount of data, through selection of key financial information, the informal financial statements for the purposes of this essay were formed. These statements were approached by financial indicators, in an attempt to describe the economic situation of the industry, especially on the border before and after the advent of the crisis. Ultimately, an attempt is made to identify possible alternatives which could lead a company safely through the financial crisis, which unfortunately lasts till today.

## **KEYWORDS**

Financial statements, technical companies.
